

Arrow functions

24 January 2025 10:49

- ✉ Version of arrow functions ES6.
- ✉ More readable and more structure.
- ✉ Anonymous functions.
- ✉ Without function name but they are assigned to a variable

Example:

Arrow function without parameter:

```
let c={()=>{  
  Console.log("hi raviteja")  
}  
c()
```

Arrow function with parameters:

```
<script>  
  let c=(a,b,x,y)=>{  
    document.write(a*b*x*y+"</br>");  
  }  
  c(5,5,5,5)  
  c(5,6,7,7)  
  c(5,7,8,8)  
</script>
```

Output:

625

1470

2240

Example3:

```
<script>
```

```
let name="raviteja"
let welcome=(name=="raviteja")?()=>document.write("yash is very good in spelling"):
()=>document.write("yash is not good in spelling writing")
welcome()
</script>
```

Output:

Yash is very good in spelling

Example3:

```
<script>
  document.write("hello kothi!!!"+"</br>");
  setTimeout(()=>{
    document.write("hello Malli!!!"+"</br>")
  },1000);
  document.write("hello gopi"+"</br>")
  document.write("hello nani"+"</br>")
</script>
```

Output:

Hello kothi

Hello malli

Hello gopi

Hello nani

Example4:

```
<script>
  function greeting(name,callback){
    document.write(`Hello, ${name}!`);
    callback();
  }
  function sayGoodBye(){
    document.write('Good Bye');
  }
  greeting("Raviteja",sayGoodBye)
</script>
```

Output:

Hello, Raviteja!Good Bye
