

## Steps to create react app:

---> create a empty folder and click on the path of the folder and open the command prompt as cmd,there we have to do this following commands.

---> first of all,we have to install npm as in the following command:

`npm install -g create-react-app`

----> next create a react new project by this command.

`npx create-react-app myproject`

--->next change the directory of the project as

`cd myproject`

----> next start the execution of the project as

`npm start`

App.js:

```
import React from 'react';
// import './App.css';
import Welcome from './Welcome';
// const Welcome={()=> <h1 className='message'>Hello Mallikarjunaraoa</h1>
// function App() {
//   return(
//     <div className="App">
//       <Welcome/> </div>
//   )
// }
const App={()=>{
return(
  <div style={{textAlign: 'center',color: 'red'}}>
```

```
    <Welcome name="Malli" greeting="hello"/>
    <Welcome name="yash" greeting="hi"/>
  </div>
)
}
export default App;
```

## Welcome.js:

```
import React from "react";
const Welcome=(props)=>{
  const[name,greeting]=props;
  return(
    <h1 className="message">{greeting},{name}</h1>
  )
}
export default Welcome;
```

## App.css:

```
.message{
color:aqua;
background-color: green;
font-size: 50px;
text-align: center;
width: 80%;
margin-left: 80px;
}
```
