Types of loops:

- For loop
- Tor in
- For of
- **While**
- To-while

For loop:

---> syntax of the for loop:

```
For(initialization; condition; update-expression){
----block of code
}
```

Ex:

```
<script>
   for(let i=0;i<=5;i++){
        console.log(i);
        document.write(i+"</br>");
(/script>
```

0

1

2

3

4

5

Ex:2:

```
    for(let i=2;i<=9;i=i+2){
        console.log(i+3);
        document.write(i+3,"</br>
}

</script>
```

Output:

5

7

9

11

//initialization:2+3=5

Then 2increment with 4 and 4<=9 and then it prints 4+3=7 Then 4 increment with 6 and 6<=9 and then it prints 6+3=9 Then 6 increment with 8 and 8<=9 and then it prints 8+3=11 Then 8 increment with 10 but 10!<=9 then loop breaks or stops.

Print the 9th table using for loop:

Output:

9

18

27

36

45

54

63

72

81

90

For in:

Example:

```
const a="karna"
for(let i in a){
    document.write(a[i])
}
</script>
```

Karna

For of:

```
<script>
    const a=["malli","yash","nani","gopi"]
    for(let i of a){
        document.write(i+"</br>
}
</script>
```

Output:

Malli

Yash

Nani

Gopi

While:

Syntax:

```
While(condition){
---block of code
}
```

Example:

Output:

1

2

3

4

5

Ex:2

```
<script>
    let i=2,n=8;
    while(i<=n){
        document.write(i+1+"</br>")
        i=i+2
    }
</script>
```

3

5

7

9

Do-while:

Example:

```
    let i=1,n=8;
    do{
        document.write(i+1+"</br>")
        i=i+2
    }
    while(i<=n){
    }
</script>
```

Output:

2

```
4
6
8
Example2:
```

```
<script>
    for(let i=1;i<=8;i=i+2){
        if(i>5){
            break;
        }
        document.write(i+1+"</br>")
    }
</script>
```

Example3:

Output:

Comments:

- Step1: initialization i=2 and it checks condition 2>5 and it is false and then increment 2+2=4
- Step2: next i becomes 3 with incrementation of 1 and it checks and increment 3+2=5
- Step3:next I becomes 4 with incrementation of 1 and it checks and increment 4+2=6
- Step4: next I becomes 5 with incrementation of 1 and it checks and increment 5+2=7
- Step5:then I becomes 6 with incrementation of 1 and it checks condition but it false then the code breaks.

Nested loops:

The inner loop will execute.

Pyramids:

```
for (let i = 1; i <= 4; i++) {
    for (let j = 1; j <= 4 - i; j++) {
        document.write("&nbsp;");
    }
    for (let k = 1; k <= i; k++) {
        document.write("*");
    }
    document.write("<br>");
}
document.write("<br>");
```

```
document.write("<br>");
```

```
*
**
***
```

Right pyramid:

Output:

*
